Clause	Requ	irement -Test	Result - Remark	Verdict

1.5 (2)	CLASSIFICATION OF LUMINAIRE		
(2.1)	Luminaires are classified according to the type of protection against electric shock, the degree of protection against ingress of dust, solid objects and moisture, the material of the supporting surface and the circumstances of use.		Р
2.2	Luminaires shall be classified according to the type of protection against electric shock provided, as class I, class II or class III (see definitions in Section 1).	class II	Р
	Luminaires shall have only a single classification. For example, for a luminaire with a built-in extra-low-voltage transformer with provision for protective earthing, the luminaire shall be classified as class I and no part of the luminaire shall be classified as class III even though the lamp compartment is separated by a barrier from the transformer compartment.		Р
2.3	Luminaires shall be classified in accordance with the "IP number" system of classification described in IEC 60529.		N/A
2.4	Luminaires shall be classified according to suitability for direct mounting on normally flammable surfaces or suitability for mounting on non-combustible surfaces		Р
1.6	MARKING		-
(3.2)	The following information shall be distinctly and durably marked on the luminaire (see Table 3.1). Each marking in Table 3.1 shall be read with the corresponding subclause as detailed in the table.		Р
(3.2)	Marking to be observed when replacing lamps or other replaceable components shall be visible on the outside of the luminaire (except the mounting side) or behind a cover which is removed during lamp or other component replacement and with the lamp removed.		Р
	Marking to be observed during installation shall be visible during installation on the outside of the luminaire or behind a cover or part which is removed during installation.		Р
	Marking to be observed after installation shall be visible with the luminaire assembled and installed as for normal use and with the lamp in place.		Р
(3.4)	The durability of the marking is checked by trying to remove it by rubbing lightly for 15 s with a piece of cloth soaked with water and, after drying, for a further 15 s with a piece of cloth soaked with petroleum spirit and by inspection after the tests detailed in Section 12 have been completed.		Р
(3.4)	After the test, the marking shall be legible, marking labels shall not be easily removable and they shall show no curling.		Р
(3.2.1)	Mark of origin Country Trademark	China OPPLE	P P
(3.2.2)	Rated voltage(s) in volts	220-240V	Р
	Portable class III luminaires shall be marked with the rated voltage on the outside of the luminaire.		N/A
	Luminaires with built-in transformers or convertors, shall be marked with the nominal voltage and/or current of the light source to ensure correct replacement. This marking shall be positioned in accordance with 3.2.8.		N/A
	Where marking is provided in accordance with 3.2.25 or 3.2.26, additional marking of the rated voltage is not required.		N/A

Clause	Requ	irement -Test	Result - Remark	Verdict

	Luminaires supplied via an external PSE shall have a marked rated voltage, which is within the voltage range of the values given in Table Y.2, for the chosen communication cable/connectors.		N/A
(3.2.3)	The rated maximum ambient temperature ta, if other than 25 °C		N/A
(3.2.4)	Class II symbol if applicable	Marked	Р
	For portable luminaires provided with a supply cord, the symbol for class II construction, if applicable, shall be on the outside of the luminaire.		N/A
	The class II symbol shall not be applied to semi-luminaires.		N/A
(3.2.5)	Class III symbol if applicable		N/A
(3.2.6)	IP number for degree of protection against dust, solid objects and moisture		N/A
	Marking of IP20 on ordinary luminaires is not required.		N/A
(3.2.7)	Maker's model number or type reference	LED E3 W BATTEN 600mm 20W 865	Р
(3.2.8)	Luminaires shall be marked with information for the maximum rated light source power or maximum input power according to 3.2.8.1, 3.2.8.2 and 3.2.8.3.	20W	Р
3.2.8.1	Luminaires for tungsten filament lamps shall be marked with the maximum rated wattage and number of lamps.		N/A
	Marking of maximum rated wattage for luminaires for tungsten filament lamps with more than one lampholder may be in the form:  "n × MAX W", n being the number of lampholders.		N/A
3.2.8.2	Luminaires designed for non-replaceable or non-user replaceable light sources shall be marked with the rated input power of the luminaire.	Led 20W	Р
3.2.8.3	For all other luminaires, rated wattage of the lamp or the designation as indicated on the lamp data sheet of the type or types of lamp for which the luminaire is designed. Where the lamp wattage alone is insufficient, the number of lamps and the type shall also be given.		N/A
(3.2.9) (598- 1)	Luminaires not suitable for direct mounting on normally flammable surfaces (suitable only for mounting on noncombustible surfaces		N/A
	Luminaires not suitable for covering with thermally insulating material	-	N/A
	The symbol shall be explained on the luminaire or in the manufacturer's instructions provided with the luminaire		N/A
	Minimum size of 25mm	-	N/A
2.2.40(500.4)	According to MOCI no need to verdict	any size of the symbol	
3.2.10(598-1)	Information concerning special lamps, if applicable.		N/A
	In particular, this applies to the symbols (see Figure 1) for luminaires for use with high pressure sodium lamps having either an internal starting device or requiring an external ignitor where the lamp is required to be marked with the same symbol according to IEC 60662.		N/A
3.2.11(598-1)	Symbol (see Figure 1), if applicable, for luminaires for lamps of similar shape to "cool beam" lamps but where the use of a dichroic reflectorized "cool beam" lamp might impair safety.		N/A
(3.2.12) (598- 1)	Except for type Z attachments, terminations shall be marked to identify live, neutral and earth in case of connection of the luminaire to the supply mains to ensure safe and satisfactory operation	Type Z	N/A
	Symbols, when applied, indicating mains supply terminations shall be according to IEC 60417.		N/A

Clause	Requ	5.15.5.25.2		Verdict
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 60598-1, SASO 2902	

	The earthing termination shall be marked by the relevant symbol of IEC 60417 only.	-	N/A
	Leads (tails) and terminations used for the connection to extra-low voltage DC supplies shall indicate their intended connection choosing one of the below mentioned combination (see Table 3.2):		N/A
	Luminaires with supply cords which are not fitted with a plug shall include with the manufacturer's instructions any information necessary to ensure safe connection, e.g. deviations from the national standardized colour coding of the cores where this does not create the possibility of an unsafe situation during installation, use or maintenance.		Р
3.2.13(598-1)	Symbol (see Figure 1) for minimum distance from lighted objects, if applicable, for luminaires which might otherwise overheat the lighted objects due to, for example, the applied lamp type, the shape of the reflector, the adjustability of the mounting means or the location of mounting as indicated in the installations instructions.		N/A
	The minimum distance marked shall be determined by the temperature test described in item j) of 12.4.1.		N/A
	The distance is measured on the optical axis of the luminaire from that part of the luminaire or lamp which is nearest to the lighted object.		N/A
	The symbol for minimum distance and explanation of its meaning shall also be given either on the luminaire or in the instructions with the luminaire.		N/A
3.2.14(598-1)	Symbol (see Figure 1), if applicable, for rough service luminaires.		N/A
3.2.15(598-1)	Symbol (see Figure 1), if applicable, for luminaires which are designed for use with bowl mirror lamps.		N/A
3.2.16(598-1)	Luminaires incorporating a protective shield shall be marked as follows:		N/A
	"Replace any cracked protective shield" or		N/A
	With the symbol (see Figure 1).		N/A
3.2.17(598-1)	The maximum number of luminaires that may be interconnected or the maximum total current that may be drawn by means of couplers provided for looping-in connection to the mains supply. For fixed luminaires, this information may alternatively be provided within the installation instructions.		N/A
3.2.18(598-1)	A warning symbol or notice for luminaires with ignitors intended for use with double ended high pressure discharge lamps and luminaires with double-capped Fa8 tubular lamps if the voltage measured according to Figure 26 exceeds 34 V peak.		N/A
	a.) Warning symbol in accordance with IEC 60417-5036 (2002-10) visible during replacement of the lamp. The symbol shall be explained on the luminaire or in the manufacturer's instructions provided with the luminaire, or		N/A
	b.) A warning notice near to the holder of a replaceable ignitor or replaceable switching element, if any:  "Attention, remove replaceable device before replacement of lamp. After lamp replacement reinsert replaceable device".		N/A
3.2.19(598-1)	Symbol (see Figure 1) for luminaires which are designed to be used only with self-shielded tungsten halogen lamps or self-shielded metal halide lamps.		N/A

Clause	Requ	55		Verdict
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 60598-1, SASO 2902	

3.2.20(598-1)	Where necessary, the means of adjustment where not obvious, needs to be identified.	N/A
3.2.21(598-1)	The relevant symbol (see Figure 1) for luminaires not suitable for covering with thermally insulated material. The symbol shall be explained on the luminaire or in the manufacturer's instructions provided with the luminaire. See Table N.1. The minimum size of the symbol shall be 25 mm for each side.	N/A
	NOTE A warning notice and symbol is required when a luminaire is not suitable for covering with thermally insulated material.	N/A
3.2.22(598-1)	Symbol (see Figure 1 from IEC 61558-1), if applicable, for luminaires with internal replaceable fuses. Such a luminaire shall, in addition, be provided with information regarding the rated current (in A or mA) of the fuse. Where the time/current characteristic of the fuse is important for safety, the rating and type of any fuse shall be marked on the holder or in the proximity of the fuse in accordance with what is stated in the relevant fuse standard.	N/A
3.2.23(598-1)	Warning symbol "Do not stare at the operating light source" (see Figure 1) for portable and handheld luminaires that have been classified as having a threshold illuminance <i>E</i> thr in accordance with IEC TR 62778. This marking shall be visible as detailed by condition 'c' of Clause 3.2 and Table 3.1. In addition, the symbol should be positioned so that it can be read without looking into the operating light source. This requirement is applicable only when <i>E</i> thr is reached at a distance further than 200 mm from the luminaire.	N/A
3.2.24(598-1)	Where required for protection against electric shock, covers fixed over non-user replaceable light sources shall be marked with the 'caution, risk of electric shock' symbol given by IEC 60417-6042:2010-11. The minimum height of this symbol shall be 15 mm (see Figure 1).	N/A
3.2.25(598-1)	Rated constant input voltage when a luminaire is operated from a constant voltage controlgear not provided with the luminaire.	N/A
3.2.26(598-1)	Rated constant input current when the luminaire is operated from a constant current controlgear not provided with the luminaire. Luminaires supplied with constant current shall also be marked with the highest allowed <i>U</i> out value of the controlgear.	N/A
3.2.27(598-1)	For luminaires operating a LED light source and containing built-in controlgear, the maximum rated electrical output characteristics from the controlgear (e.g. current for constant current controlgear), for which the luminaire has been designed, shall be marked as required in the first column of Table 3.1 belonging to item a). For luminaires incorporating a constant light output function, this marking shall indicate the maximum operating conditions for which the luminaire has been designed. For luminaires using external independent controlgear delivered with the luminaire, this marking shall be visible according to the second column of Table 3.1 belonging to item b).	Р
	NOTE This marking is additional to any information already marked on the controlgear.	N/A

Clause	Requ	Requirement -Test		Verdict

` ,	PROVISION FOR EARTHING		
7.1(598-1)	This section specifies requirements, where applicable, for the earthing of luminaires.	Class II	N/A
•	Provision for earthing	-	N/A
·	Metal parts of class I luminaires which are accessible when the luminaire has been mounted, or is opened for replacement of a replaceable light source or replaceable starter or for cleaning purposes, and which may become live in the event of an insulation fault, shall be permanently and reliably connected to a protective earthing terminal or protective earthing contact.	-	N/A
	Metal parts screened from live parts by metal parts which are connected to the protective earthing terminal or protective earthing contact, and metal parts separated from live parts by double insulation or by reinforced insulation, are not, for the purpose of this requirement, regarded as likely to become live in the event of an insulation fault.	-	N/A
	NOTE 1 If a lamp breaks during a re-lamping operation, the breakage is not regarded as an insulation fault according to 7.2.1, as the lamp in this sense is not considered to be a part of the luminaire (see 0.4.2 and 8.2.3 item a) for clarification).		N/A
	Metal parts of luminaires which may become live in the event of an insulation fault and which are not accessible when the luminaire has been mounted, but are liable to come into contact with the supporting surface, shall be permanently and reliably connected to an earthing terminal.	-	N/A
	NOTE 2 The earthing of starters and lamp caps is not a requirement but earthing of lamp caps may be necessary as a starting aid.		N/A
	The protective earthing connections shall be of low resistance.		N/A
	Self-tapping screws may be used to provide earthing continuity, provided they comply with the requirements given in 4.12.1		N/A
	Thread-forming screws may be used to provide earthing.		N/A
	A thread forming screw used in a groove of a metallic material could provide earth continuity for a luminaire if all the tests required within this standard regarding earthing connection were passed. See Figure 30.		N/A
	For class I luminaires with detachable parts provided with connectors or similar connection devices, the protective earth connection shall be made before the current-carrying contacts are made and the current-carrying contacts shall separate before the protective earth connection is broken		N/A
	For terminal blocks with integrated screwless protective earthing contacts, the additional tests of Annex V are to be applied. It is allowed to earth built-in controlgear by means of fixing the controlgear to earthed metal parts of the luminaire. Connection to protective earthing of the luminaire via the built-in controlgear is not allowed.		N/A
(000 .	Surfaces in adjustable joints, telescopic tubes, etc., providing earthing continuity, shall be such that a good electrical contact is ensured.		N/A
7.2.3 <b>(598-1</b>	Compliance with the requirements of 7.2.1 and 7.2.2 is checked by inspection and, for protective earth, by the following test.		N/A
	A current of at least 10 A, derived from a source with a no-load voltage not exceeding 12 V, shall be passed between the earthing terminal or earthing contact and each of the accessible metal parts in turn.		N/A
	The voltage drop between the earthing terminal or earthing contact and the accessible metal part shall be measured and the		N/A

			150 00500 0 4 150 001	-00 4

resistance calculated from the current and the voltage drop. In no case shall the resistance exceed 0,5 Ω. When type testing, the current shall be applied for a period of at least 1 min.  NOTE In the case of a luminaire with a supply cord, the earthing contact is at the plug or supply end of the flexible cable or cord.  7.2.4(598-1) Protective Earthing terminals shall comply with the requirements of 4.7.3. The connection shall be adequately locked against accidental loosening.  For screw terminals, it shall not be possible to loosen the clamping means by hand.	N/A N/A
NOTE In the case of a luminaire with a supply cord, the earthing contact is at the plug or supply end of the flexible cable or cord.  7.2.4(598-1) Protective Earthing terminals shall comply with the requirements of 4.7.3. The connection shall be adequately locked against accidental loosening.  For screw terminals, it shall not be possible to loosen the clamping means by hand.	
contact is at the plug or supply end of the flexible cable or cord.  7.2.4(598-1 Protective Earthing terminals shall comply with the requirements of 4.7.3. The connection shall be adequately locked against accidental loosening.  For screw terminals, it shall not be possible to loosen the clamping means by hand.	
of 4.7.3. The connection shall be adequately locked against accidental loosening.  For screw terminals, it shall not be possible to loosen the clamping means by hand.	N/A
For screw terminals, it shall not be possible to loosen the clamping means by hand.	ĺ
	N/A
For screwless terminals, it shall not be possible to loosen the clamping means unintentionally.	N/A
Compliance is checked by inspection, by manual test and by the tests specified in 4.7.3.	N/A
NOTE In general, the designs commonly used for current-carrying terminals provide sufficient resilience to comply with this requirement; for other designs, special provisions, such as the use of an adequately resilient part which is not likely to be removed inadvertently, can be necessary.	N/A
For terminal blocks with integrated screwless earthing contacts, the additional tests of Annex V apply.	N/A
7.2.5(598-1 For a luminaire provided with a connector socket for a mains supply, the earth contact shall be an integral part of the socket.	N/A
7.2.6(598-1 For a luminaire to be connected to supply cables (fixed wiring) or to a supply cord, the earth terminal shall be adjacent to the mains terminal.	N/A
NOTE Luminaires may be provided with type X or Y attachments.	N/A
7.2.7(598-1 For luminaires which are other than ordinary luminaires, all parts of an earth terminal shall be such as to minimize the danger of electrolytic corrosion resulting from contact with the earth conductor or any other metal in contact with them.	N/A
7.2.8(598-1 Either the screw or the other part of the protective earth terminal shall be made of brass or other non-rusting metal or a material with a non-rusting surface and the contact surfaces shall be of bare metal	N/A
7.2.9(598-1 Compliance with the requirements of 7.2.5 to 7.2.8 is checked by inspection and by manual test.	N/A
7.2.10(598- If a fixed class II luminaire designed for looping-in is provided with internal terminal(s) for maintaining the electrical continuity of an earthing conductor not terminating in the luminaire, this(these) terminal(s) shall be insulated from accessible metal parts by double insulation or reinforced insulation.	N/A
A fixed connected class II luminaire may have an earth connection for functional purposes, for example for looping in, to assist the starting of a lamp or to avoid radio interference. The functional earth circuit shall be separated from live parts by double or reinforced insulation.	N/A
Compliance is checked by inspection.	N/A
7.2.11 <b>(598-</b> When a class I luminaire is supplied with a supply cord, this cord shall have an earthing core colored green-yellow.	N/A
The green-yellow core of a supply cord shall be connected to the earthing terminal of the luminaire and to the earthing contact of the plug if one is attached.	N/A
	N/A N/A

Clause	Requ	irement -Test	Result - Remark	Verdict

	terminals, or the length of the conductors between the cord anchorage and the terminals, shall be such that, should the cable or cord move out of the cord anchorage, the current-carrying conductor becomes taut before the earthing conductor.	
	Compliance is checked by inspection.	N/A
1	Where a PELV circuit is connected to a protective earth for functional purposes, this circuit shall not be used for interconnection with other luminaires to avoid overload of the circuit conductor.	N/A
	NOTE The overload of the conductor can be caused by fault current coming from a different point of the earth circuit of a building to earth.	N/A

1.14 (9)	RESISTANCE TO DUST, SOLID OBJECTS AND MOISTURE	
9.1	General	Р
	This section specifies the requirements and tests for luminaires	
	classified as resistant to dust, solid objects and moisture in	P
	accordance with Section 2, including ordinary luminaires.	
9.2	Tests for ingress of dust, solid objects and moisture	N/A
	The enclosure of a luminaire shall provide the degree of protection	
	against ingress of dust, solid objects and moisture in accordance	N/A
	with the classification of the luminaire and the IP number marked	IN/A
	on the luminaire.	
	NOTE 1 The tests for the ingress of dust, solid objects and	
	moisture specified in this standard are not all identical to the tests	
	in IEC 60529 because of the technical characteristics of	N/A
	luminaires. An explanation of the IP numbering	
	system is given in Annex J.	
	Compliance is checked by the appropriate tests specified in 9.2.0	
	to 9.2.9, and for other IP ratings by the appropriate tests specified	N/A
	in IEC 60529.	
	Before the tests for the second characteristic numeral, with the	
	exception of IPX8, the luminaire complete with lamp(s) shall be	N/A
	switched on and brought to a stable operating temperature at	IN/A
	rated voltage.	
	The water for the tests shall be at a temperature of 15 °C ± 10 °C	
	except for IPX9 where the temperature shall be 80 °C (±5 °C) or 15	N/A
	°C (±10 °C) following the marking of the luminaire.	
	Luminaires shall be mounted and wired as in normal use and	
	placed in the most unfavourable position, complete with their	N/A
	protective translucent covers, if any, for the tests of 9.2.0 to	14// (
	9.2.11.	
	Where connection is made by a plug or a similar device, then this	
	shall be regarded as part of the complete luminaire and shall be	N/A
	included in the tests and similarly for any separate control gear.	
	For tests of 9.2.3 to 9.2.11, a fixed luminaire intended for mounting	
	with its body in contact with a surface shall be tested with an	
	expanded metal spacer interposed between the luminaire and the	N/A
	mounting surface. The spacer shall be at least equal in overall size	
	to the projection of the luminaire, and have dimensions as follows:	
	Long way of mesh 10 mm to 20 mm	
	Short way of mesh 4 mm to 7 mm	
	Strand width 1,5 mm to 2 mm	N/A
	Strand thickness 0,3 mm to 0,5 mm	
	Overall thickness 1,8 mm to 3 mm	
	Luminaires having provision for draining water by means of drain	
	holes shall be mounted with the lowest drain hole open unless	N/A
	otherwise specified in the manufacturer's installation instructions.

Issue No : 2	Issue Date : 01/10/2020	Revision No: 2	Revision Date : 05/08/2023		
SAITCO, First Industrial City area ,Riyadh Station area beside dry customs St.4;5,6,7 Building No. 2433 , Riyadh 11427, PO 27711 , Tel: +966 11 2043000,Fax +966 1 2042888, www.saitco.com.sa					

Clause	Requirement -Test		Result - Remark	Verdict
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 609 SASO 2902	598-1,

If the installation instructions indicate that a drip-proof luminaire is for ceiling or under-canopy mounting, the luminaire shall be	N1/A
attached to the underside of a flat board or plate which extends 10 mm beyond that part of the luminaire perimeter in contact with the mounting surface.	N/A
For recessed luminaires, the parts in the recess and the parts	
protruding from the recess shall each be tested according to their	
IP classification as indicated in the manufacturer's mounting	N/A
instructions. A box encapsulating the part in the recess may be	
necessary for the tests of 9.2.4 to 9.2.11.	
NOTE 2 The claimed IP rating is only applicable to the enclosure	
of the luminaire. In the case of a recessed	
luminaire, the IP rating of the luminaire does not protect the	N/A
integrity of any seals outside of the luminaire, e.g. between the	
lower and upper parts of the ceiling.	
For IP2X luminaires, the enclosure denotes that part of the	
luminaire containing the main part other than the lamp and optical	N/A
controls.	
NOTE 3 Since luminaires have no hazardous moving parts, the level of safety as specified in IEC 60529 is achieved.	N/A
Portable luminaires, wired as in normal use, shall be placed in the	N/A
most unfavourable position of normal use.	14/1
Glands, if any, shall be tightened with a torque equal to two-thirds	N/A
of that applied to glands in the test of 4.12.5.	
Fixing screws of covers, other than hand-operated fixing screws of	<b>3.1/4</b>
glass covers, shall be tightened with a torque equal to two-thirds of	N/A
that specified in Table 4.1.	
Screwed lids shall be tightened with a torque having a value in	
newton meters numerically equal to one-tenth of the nominal	N/A
diameter of the screw thread in millimeters. Screws fixing other caps shall be tightened with a torque equal to two-thirds of	IN/A
that specified in Table 4.1.	
After completion of the tests, the luminaire shall withstand the	
electric strength test specified in Section 10, and inspection shall	N/A
show:	14/7
a) no deposit of talcum powder in dust-proof luminaires, such that,	
if the powder were conductive, the insulation would fail to meet the	N/A
requirements of this standard;	
b) no deposit of talcum powder inside enclosures for dust-tight	N/A
luminaires;	IN/A
c) no trace of water on electrical connections, current carrying	
parts or on insulation where it could become a hazard for the user	
or surroundings, for example where it could reduce	
the creepage distances below the values specified in Section 11;	
the only exception to this is for SELV or PELV conductors where	N/A
the voltage under load does not exceed 12 V peak	
interrupted DC voltage for frequencies between 10 Hz and 200 Hz,	
12 V RMS or 30 V ripple free DC and the conductors are protected	
from corrosion.	
NOTE 4 Some aspects of protection against corrosion are covered	
by Clause 4.18.	
1) For luminaires without drain holes, there shall be no water entry.	
NOTE 5 Care is taken not to mistake condensation for water entry.	N/A
For luminaires with drain holes, water entry including condensation is allowed during the tests if it can drain out	IN/A
effectively and provided it does not reduce the creepage	
and clearance distances below the minimum levels specified in this	
document;	
aocument;

Clause	Requ	irement -Test	Result - Remark	Verdict
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 60598-1, SASO 2902	

	d) no trace of water having entered in any part of a watertight or pressure watertight luminaire or high pressure and temperature water jet-proof luminaire or high pressure and cold water jet-proof luminaire;	N/A
	e) no contact permitted with live parts by the relevant test probe for first characteristic IP numeral 2; no entry into the luminaire enclosure by the relevant test probe for first characteristic IP numerals 3 and 4; for luminaires with drain holes in accordance with Clause 4.17 and luminaires with ventilation slots for forced cooling, no contact with live parts is permitted through the drain holes and ventilation slots with the relevant test probe for the first characteristic IP numerals 3 and 4;	N/A
	f) no trace of water on any part of a lamp requiring protection from splashing water as indicated in the "information for luminaire design" section of the applicable lamp standard;	N/A
	g) no damage, for example, cracking or breakage of a protective shield or glass envelope, such that safety or protection against the ingress of moisture is impaired.	N/A
9.2.0	Tests	N/A
	Solid-object-proof luminaires (first characteristic IP numeral 2) shall be tested with the standard test finger specified in IEC 60529 in accordance with the requirements of Sections 8 and 11.	N/A
	Luminaires with first characteristic IP numeral 2 are not required to be tested with the sphere specified in IEC 60529.	N/A
	Solid-object-proof luminaires (first characteristic IP numerals 3 and 4) shall be tested at every possible point (excluding gaskets) with a probe in accordance with test probe C or D of IEC 61032, applied with a force as specified in Table 9.1:	N/A
	The end of the probe wire shall be cut at right angles to its length and be free from burrs.	N/A
9.2.1	Dust-proof luminaires (first characteristic IP numeral 5) shall be tested in a dust chamber similar to that shown in Figure 6, in which talcum powder is maintained in suspension by an air current. The chamber shall contain 2 kg of powder for every cubic metre of its volume. The talcum powder used shall be able to pass through a square-meshed sieve whose nominal wire diameter is 50 µm and whose nominal free distance between wires is 75 µm. It shall not have been used for more than 20 tests.	N/A
	The test shall proceed as follows:	N/A
	a) The luminaire is suspended outside the dust chamber and operated at rated supply voltage until operating temperature is achieved.	N/A
	b) The luminaire, whilst still operating, is placed with the minimum disturbance in the dust chamber.	N/A
	c) The door of the dust chamber is closed.	N/A
	d) The fan/blower causing the talcum powder to be in suspension is switched on.	N/A
	e) After 1 min, the luminaire is switched off and allowed to cool for 3 h whilst the talcum powder remains in suspension.	N/A
	NOTE The 1 min interval between switching on the fan/blower and switching off the luminaire is to ensure that the talcum powder is properly in suspension around the luminaire during initial cooling, which is most important with smaller luminaires. The luminaire is operated initially as in item a) to ensure the test chamber is not overheated.	N/A
9.2.2	Dust-tight luminaires (first characteristic IP numeral 6) are tested in accordance with 9.2.1.	N/A
9.2.3	Drip-proof luminaires	N/A

Clause	Requ	irement -Test	Result - Remark	Verdict
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 60598-1, SASO 2902	

9.2.3.1	Drip-proof luminaires (second characteristic IP numeral 1) are	
0.2.0	subjected for 10 min to an artificial rainfall of 0 5 1 0+, mm/min,	N1/A
	falling vertically from a height of 200 mm above the top of the	N/A
	luminaire.	
9.2.3.2	Drip-proof luminaires (second characteristic IP numeral 2) are	
	subjected for 10 min to an artificial rainfall of 0 5 3 0+, mm/min,	
	falling vertically from a height of 200 mm above the top	N/A
	of the luminaire, when the luminaire is in the most onerous position	
	and tilted at any angle up to 15° on either side of the vertical.	
9.2.4	Rain-proof luminaires (second characteristic IP numeral 3) are	
	sprayed with water for 10 min by means of a spray apparatus as	
	shown in Figure 7. The radius of the semicircular tube shall be as	N/A
	small as possible and compatible with the size and position of the	
	luminaire.	
	The tube shall be perforated so that jets of water are directed	
	towards the centre of the circle and the water flow rate at the inlet	
	of the apparatus shall be approximately 0,07 l/min with a	N/A
	tolerance of ±5 % per hole multiplied by the number of holes	
	(approximately 80 kN/m2).	
	The tube shall be caused to oscillate through an angle of 120°, 60°	
	on either side of the vertical, the time for one complete oscillation	N/A
	(2 □ □120°) being about 4 s.	
	The luminaire shall be mounted above the pivot line of the tube so	
	that the ends of the luminaire receive adequate coverage from the	N/A
	jets. The luminaire shall be turned about its vertical axis during the	14// (
	test at a rate of 1 r/min.	
	After this 10 min period, the luminaire shall be switched off and	
	allowed to cool naturally whilst the water spray is continued for a	N/A
	further 10 min.	
	NOTE In Japan, the oscillating tube test and the spray nozzle test	N/A
	as specified in IEC 60529 are accepted.	
9.2.5	splash-proof luminaires (second characteristic IP numeral 4) are	
	sprayed from every direction with water for 10 min by means of the	N1/A
	spray apparatus shown in Figure 7 and described in 9.2.4. The	N/A
	luminaire shall be mounted under the pivot line of the tube so that	
	the ends of the luminaire receive adequate coverage from the jets.	
	The tube shall be caused to oscillate through an angle of almost	
	360°, 180° on either side of the vertical, the time for one complete	N/A
	oscillation (2 □ 360°) being about 12 s. The luminaire shall be	
	turned about its vertical axis during the test at a rate of 1 r/min.	
	The support for the equipment under test shall be grid shaped in	
	order to avoid acting as a baffle. After this 10 min period, the	N/A
	luminaire shall be switched off and allowed to cool naturally whilst the water spray is continued for a further 10 min.	
	NOTE In Japan, the oscillating tube test and the spray nozzle test	
	as specified in IEC 60529 are	N/A
	accepted.	IN/A
9.2.6	Jet-proof luminaires (second characteristic IP numeral 5) are	
J.Z.U	switched off and immediately subjected to a water jet for 15 min	
	from all directions by means of a hose having a nozzle with the	N/A
	shape and dimensions shown in Figure 8. The nozzle shall be held	111/71
	3 m away the sample.	
	The water pressure at the nozzle shall be adjusted to achieve a	
	water flow rate of 12,5 l/min with a tolerance of ±5 %	N/A
	(approximately 30 kN/m2).	1 1/7
	(approximately to Millia).	L

Clause	Requ	irement -Test	Result - Remark	Verdict
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 60598-1, SASO 2902	

9.2.7	Powerful water jet-proof luminaires (second characteristic IP numeral 6) are switched off and immediately subjected to a water	
	jet for 3 min from all directions by means of a hose having a nozzle	N/A
	with the shape and dimensions shown in Figure 8. The nozzle shall	
	be held 3 m away from the sample.	
	The water pressure at the nozzle shall be adjusted to achieve a	
	water flow rate of 100 l/min with a tolerance of ±5 %	N/A
9.2.8	(approximately 100 kN/m2).	
9.2.0	Watertight luminaires (second characteristic IP numeral 7) are switched off and immediately immersed for 30 min in water, so that	
	there is at least 150 mm of water above the top of the luminaire	
	and the lowest portion is subjected to at least 1 m head of water.	<b>.</b> 1/0
	Luminaires shall be held in position by their normal fixing means.	N/A
	Luminaires for tubular fluorescent lamps shall be positioned	
	horizontally, with the diffuser upwards, 1 m below the water	
	surface.	
	NOTE This treatment is not sufficiently severe for luminaires	N/A
9.2.9	intended for operation under water.	
9.2.9	Pressure watertight luminaires (second characteristic IP numeral 8) are heated either by switching on the lamp or by other suitable	
	means, so that the temperature of the luminaire enclosure exceeds	N/A
	that of the water in the test tank by between 5 °C and 10 °C.	
	The luminaire shall then be switched off and subjected to a water	
	pressure of 1,3 times that pressure which corresponds to the rated	N/A
	maximum immersion depth for a period of 30 min.	
9.2.10	High pressure and temperature water jet-proof luminaires (second	
	characteristic IP numeral 9 (80 °C)) are switched off and	
	immediately subjected to the high pressure and high temperature water jet. The test is made by spraying the luminaire	
	with a stream of hot water from a standard test nozzle as	
	described in IEC 60529. The water for the tests shall be at a	
	temperature of (80 ± 5) °C. For small enclosures (largest	N/A
	dimension less than 250 mm), the test duration is in total 2 min.	
	For large enclosures (largest dimension greater than or equal to	
	250 mm), the test duration is 1 min/m2 of the calculated surface	
	area of the enclosure (excluding any mounting surface), with a	
9.2.11	minimum duration of 3 min.	
9.2.11	High pressure and cold water jet-proof luminaires (second characteristic IP numeral 9 (15 °C) are switched off and	
	immediately subjected to the high pressure and cold temperature	
	water jet. The test is made by spraying the luminaire with a stream	
	of water from a standard	
	test nozzle as described in IEC 60529. The water for the tests shall	N/A
	be at a temperature of $(15 \pm 10)$ °C. For small enclosures (largest	14// (
	dimension less than 250 mm), the test duration is	
	in total 2 min. For large enclosures (largest dimension greater than or equal to 250 mm), the test duration is 1 min/m2 of the calculated	
	surface area of the enclosure (excluding any	
	mounting surface), with a minimum duration of 3 min.	
9.3	Humidity test	-
	All luminaires shall be humidity-proof where humid conditions	
	may occur in normal use.	
	Compliance is checked by the humidity treatment described in	Р
	9.3.1, followed immediately by the tests of Section 10.	'
	Cable entries, if any, shall be left open; if knock-outs are provided,	N/A
	one of them shall be opened.	
	Parts which can be removed by hand (e.g. electrical components,	
	covers, protective glasses.), shall be removed and subjected, if necessary, to the humidity treatment with the main	N/A
	part.

9.3.1	The luminaire is placed in the most unfavourable position of normal use, in a humidity cabinet containing air with a relative humidity maintained between 91 % and 95 %. The temperature of the air at	P
	all places where samples can be located shall be maintained within 1 °C of any convenient value "t" between 20 °C and 30 °C.	•
	Before being placed in the humidity cabinet, the sample shall be brought to a temperature between "t" and (t + 4) °C. The sample shall be kept in the cabinet for 48 h.	Р
	NOTE In most cases, the sample may be brought to the specified temperature between "t" and (t + 4) °C by keeping it in a room at this temperature for at least 4 h before the humidity treatment.	Р
	In order to achieve the specified conditions within the cabinet, it is necessary to ensure constant circulation of the air within and in general to use a cabinet which is thermally insulated.	Р
	After this treatment, the sample shall show no damage affecting compliance with the requirements of this standard.	Р

Clause Requirements of Non- directional / directional lamps, control gears and luminaires  4.1 Requirements for Non- directional / directional lamps, control gears and luminaires  Lamps listed in Annex A of this Standard shall comply with the energy efficiency requirements specified in Annex C for non-directional lamps and Annex E for directional lamps.  For Incandescent, Halogen, and CFLi with luminous flux above or equal to 12,000 lumens the tests and criteria described in SASO 2870 apply  For LED lamps, tests and criteria described in SASO 2870 apply.  Energy efficiency classes and the methods of calculating the EEI for lamps are also detailed in Annex C for non-directional lamps and Annex E for directional lamps.  Ballasts and control gears shall comply with the Energy Efficiency Requirements specified in Annex H.  Luminaires in the scope of this standard (integrated luminaires) shall comply with energy efficiency requirements expressed in Annex M of this standard.  Annex A - Regulated products in the scope of this standard  This Standard establishes requirements for the placing on the market of the below listed lamp types, and of control gears (ballasts) able to operate such lamps, even when they are integrated into other energy-using products  This Standard is applicable to lamps and luminaires with a luminous flux above 60 lumens.  A.2 Luminaires  This standard establishes requirements for the placing on the market of the below list of with integrated luminaires  (provided with non-replaceable lamps) which are designated under the categories:  Directional integrated luminaires  Directional integrated luminaires  N/A  Non-directional luminaires  M.1 Types of luminaires  M.1 Types of luminaires		SASO2902		
### Lamps listed in Annex A of this Standard shall comply with the energy efficiency requirements specified in Annex C for non-directional lamps and Annex E for directional lamps.  For Incandescent, Halogen, and CFLi with luminous flux above or equal to 12,000 lumens the tests and criteria described in SASO 2870 apply  For LED lamps, tests and criteria described in SASO 2870 apply.  For LED lamps, tests and criteria described in SASO 2870 apply.  Energy efficiency classes and the methods of calculating the EEI for lamps are also detailed in Annex C for non-directional lamps and Annex E for directional lamps.  Ballasts and control gears shall comply with the Energy Efficiency Requirements specified in Annex H.  Luminaires in the scope of this standard (integrated luminaires) shall comply with energy efficiency requirements expressed in Annex M of this standard.  Annex A - Regulated products in the scope of this standard.  Annex A - Regulated products in the scope of this standard (integrated luminaires) shall comply with the scope of this standard.  This Standard establishes requirements for the placing on the market of the below listed lamp types, and of control gears (ballasts) able to operate such lamps, even when they are integrated into other energy-using products  This Standard is applicable to lamps and luminaires with a luminous flux above 60 lumens.  A.2 Luminaires  This standard establishes requirements for the placing on the market of the below list of with integrated luminaires (provided with non-replaceable lamps) which are designated under the categories:  Directional integrated luminaires  Directional luminaires  Directional luminaires  N/A  Non-directional luminaires  Panex M - Energy efficiency for (integrated) luminaires	Clause			
Lamps listed in Annex A of this Standard shall comply with the energy efficiency requirements specified in Annex C for non-directional lamps and Annex E for directional lamps. ## ANNEX N - Criteria for market surveillance

The enforcer may draw a sample of batch of a minimum of twenty (20) lamps or ten (10) luminaires of the same model from the same manufacturer, where possible obtained in equal proportion from four randomly selected sources, unless specified otherwise in Table 38.

The model shall be considered to comply with the requirements laid down in this Standard if:

- The lamps in the batch are accompanied by the required and correct product information,
  - All parameters listed in Table 38 are met

All parameters listed in Table 38 are met.		
Parameter	Procedure	
Energy efficiency index1	Compliance: The Energy Efficiency Index (EEI) value for lamps in the scope of this Standard shall be less than or equal to the specified values in Tables 2 and 8, when calculated at both rated and average tested power and luminous flux. Furthermore, the average EEI of the sample tested should be not higher than 10% of the rated EEI, and each lamp in the sample should have an EEI value within 10% of the sample's average EEI. For Luminaires the MEPS for Energy Efficacy shall be respected for each product; furthermore, the average efficacy of the sample tested should not be lower 10% of the rated efficacy (in Lumen/W), and each luminaire in the sample should have an efficacy value within 10% of the sample's average efficacy. Non-compliance: otherwise	
Lamp survival factor at 6000 h (for LED lamps only)	The test shall end  when the required number of hours is met, or when more than two lamps fail, whichever occurs first Compliance: a maximum of two out of every 20 lamps in the test batch may fail before the required number of hours Non-compliance: otherwise	
Number of switching cycles before failure	The test shall end when the required number of switching cycles is reached, or when more than one out of every 20 lamps in the test batch have reached the end of their life, whichever occurs first  Compliance: at least 19 of every 20 lamps in the batch have no failure after the required number of switching cycles is reached Non-compliance: otherwise	
Starting time	Compliance: the average starting time of the lamps in the test batch is not higher than the required starting time plus 10 %, and no lamp in the sample batch has a starting time longer than two times the required starting time Non-compliance: otherwise	
Lamp warm-up time to 60 % Ф	Compliance: the average warm-up time of the lamps in the test batch is not higher than the required warm-up time plus 10%, and no lamp in the sample batch has a warm-up time that exceeds the required warm-up time multiplied by 1.5	

F07-08-02 A	Page 24 of 44	Issued By: QGM	Approved By: GM
Issue No : 2	Issue Date : 01/10/2020	Revision No: 2	Revision Date : 05/08/2023

Clause	Requi	irement -Test	Result - Remark	Verdict	
Test Report No :	E-EF-230516	Standard No:	IEC 60598-2-1 , IEC 60598-1, SASO 2902		

1 The tolerances for variation indicated above relate only to the verification of the measured parameters by the authorities and shall not be used by the supplier as an allowed tolerance on the values in the technical documentation to achieve a more efficient energy class. The declared values shall not be more favorable for the supplier than the values reported in the technical documentation. Non-compliance: otherwise The test shall end ☐ when the required number of hours is met, or Premature ☐ When more than one lamp fails, whichever occurs first failure rate Compliance: a maximum of one out of every 20 lamps in the test batch fails before the required number of hours Non-compliance: otherwise Compliance: the average Ra of the lamps in the test batch is not lower than three points below the required value, and no lamp in the test batch has a Ra value that is more than Color rendering 3.9 points below the required value (Ra) Non-compliance: otherwise For these purposes, 'end of life' shall mean the point in time when only 50 % of the lamps are projected to survive or when the average lumen maintenance of the batch is projected to fall below 70 %, whichever is projected to occur first Lumen Compliance: the lumen maintenance at end of life and the lifetime values obtained by maintenance at end of life and extrapolation from the lamp survival factor and from the average lumen maintenance of rated lifetime (for the lamps in the test batch at 6000 h are not lower than respectively the lumen LED lamps only) maintenance and the rated lifetime values declared in the product information minus 10 Non-compliance: otherwise If only the equivalence claim is verified for compliance, it is sufficient to test 10 lamps, Equivalence where possible obtained approximately in equal proportion from four randomly selected claims for retrofit lamps according Compliance: the average results of the lamps in the test batch do not vary from the limit, to Annex G threshold or declared values by more than 10 % Non-compliance: otherwise Compliance: the average results of the lamps in the test batch do not vary from the declared beam angle by more than 25 % and the beam angle value of each individual Beam angle lamp in the test batch does not deviate by more than 25 % of the rated value Non-compliance: otherwise Compliance: the peak intensity of each individual lamp in the test batch is not less than 75 % of the rated intensity of the model Peak intensity Non-compliance: otherwise Compliance: the average results of the lamps in the test batch do not vary from the limit,

If a model within the registered family of product fails, the registration of all models under the same family of product will be automatically canceled.

## M.2 - Minimum Efficacy for luminaires

Other parameters

The minimum energy efficacy for luminaires are reported in Table 35, depending on the total power of the luminaires.

threshold or declared values by more than 10 %.

## Annex D – Functionality and endurance requirements for non-directional lamps and luminaires D.3 – Functionality and Endurance requirements for non-directional LED lamps and luminaires

Add Before table 13 (2902:2021)	Lumen maintenance and survival factors values at 6000 h shall meet the limits in table 13 in accordance with IEC 62722 or IES LM 84 and shall be
	submitted in registration system. In case IEC 62717 or IES LM 80 test report is available then, Lumen maintenance and survival factors values at 2000 h are accepted and shall meet the limits in the table 13 in accordance with IEC 62722 or IES LM 84.

Table 13: Functionality and endurance requirements for non-directional LED lamps and luminaires				
Functionality parameter	Requirement	Result(s)	-	
Lamp survival factor at 6 000h	≥0.90	100%	Р	
Lumen Maintenance at 6 000h	≥0.80	91.5%	Р	
Number of switching cycles	≥15 000 if rated lamp life ≥30000h otherwise:		N/A	
before failure	≥half the rated lamp life expressed in hours	25000	Р	
Starting time	< 0.5s	0.254	Р	
Lamp warm-up time to 95 % Ф	< 2 s	0.165	Р	
Premature failure rate	≤5.0% at 1 000h	0	Р	
Color rendering (Ra)	≥80 /≥65 if the lamp is intended for outdoor or industrial applications	83.8	Р	
Color consistency	Variation of chromaticity coordinates within a six-step Mac Adam ellipse or less.		N/A	
	P ≤ 2W : no requirement		N/A	
Lamp displacement factor (Df)	2W < P ≤5W : DF ≥ 0.4		N/A	
with integrated control gear	5 W < P ≤ 25W : DF ≥ 0.7		N/A	
	P > 25W : DF ≥ 0.9	0.951	Р	

## Annex F Functionality requirements for directional lamps and integrated Luminaires

Table 18: Functionality and endurance requirements for directional LED lamps and integrated luminaires					
Functionality parameter	Requirement	Result(s)	-		
Lamp survival factor at 6 000h	≥0.90		N/A		
Lumen Maintenance at 6 000h	≥0.80		N/A

☑ The sample passed all the above-mentioned tests in accordance with the requirements of the product						
☐ The sample passed all the tests mentioned above in accordance with the requirements for the product, except for the test where the measured value does not meet the requirements of the product mentioned in the attached standard specifications.						
The result is for the sample re	eferred to	in the report, which	n has been tested or	nly and is only	representative of itself.
